

Introduction

This report displays the most current version of the Grazing Land Management (GLM) land types for the selected Lot on Plan. The land type map is generated from a GIS shapefile which is developed based on regional ecosystems mapping and GLM information. Most of the land types and their boundaries have not been validated with field observations. Therefore, the land type map is only indicative and can be used to understand what land types are expected on the area selected. The approximate land type area (hectares) and their percentage of the total area are summarised on the second page.
