

## Introduction

This Pasture and Rainfall Report is for the location indicated by the red crosshair symbol on the map below. This report includes a rainfall and pasture growth summary, and graphs showing historical time series for: 1) monthly average pasture Total Standing Dry Matter (TSDM); 2) monthly average ground cover; 3) annual rainfall (April to March) and 4) annual pasture growth (April to March). Pasture TSDM, cover and growth are simulated using the GRASP/AussieGRASS model; accuracy may be limited by available stock number and climate data.

## Summary

	Annual average	Total for last 12 months	Annual percentile*			
			10th (extremely low)	30th (low)	50th (median)	70th (high)
<b>Rainfall (mm)</b>	699	455	438	650	722	763
<b>Simulated pasture growth (kg/ha)</b>	2318	711	621	1359	2366	3057

\*A percentile is used to indicate where a value lies within the range of historically measured records. For example, if last year's rainfall was the 30th percentile, then last year's rainfall was higher than the annual rainfall of 30% of the years in the record, but lower than the annual rainfall of the remaining 70% of the years
